

WORKSHOPS

condensed experiments of analysis concept design and prototyping

The beauty of workshops are their restrictions - limited resources, limited materials and limited time - forcing you be quick and creative. They allow you to experiment in analysis, concept, design and prototyping. Here's a selection:

- **Bamboo + Earth:** part of the African Perspectives week at TU Delft (2007) aiming at working with local African materials. The workshop result is a double curved facade constructed in bamboo and finished with thatch & loam.
- **Rediscover Paper:** event just about paper & cardboard, their production methods & techniques. My result is an adjustable and disassembleable bar table made of just cardboard plotter paper roles (and ducttape).
- **HK Fantasies - Saving the micro:** two weeks of research & design in Hong Kong with IFOU, TU Delft, BIR, CUHK, UHK, Beijing UT and

MVRDV. My result is a concept strategy for saving Hong Kong's micro economy through adaption and (partial) formalization.
